JBC - 2

The bag was examined for any evidence of the outline of a rifle but no significant indentations were found. Dismantled, Oswald's rifle will fit into this paper bag.

D. Bullet Fragments

Several tiny fragments of lead were recovered from the President's head and his limousine, and one was recovered from Governor Connally's arm. However, these fragments were too small for the FBI Laboratory to effect an identification with any weapon.

Examination of the limousine also disclosed that the windshield was cracked and there was a dented area in the windshield chrome molding at the top near the center which may have been caused by bullet fragments.
